

Technology Stack - Heart Disease Analysis

Date: 4/7/2026

Project Name: Heart Disease Analysis

S.No	Architecture Component	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS, JavaScript	Responsive interface for entering patient data and viewing predictions.
2	Backend / Server-Side	Python (Flask)	Processes patient data and runs the prediction model.
3	Database / Data Storage	MySQL	Stores patient records and prediction results securely.
4	Cloud / Deployment	Render / PythonAnywhere	Easy and cost-effective application deployment.
5	Version Control & CI/CD	Git & GitHub	Version control and team collaboration.
6	Third-Party APIs / Tools	Scikit-learn, Pandas, NumPy, Matplotlib	Machine learning, data processing, and visualization.
